PROJECTS

MEDONATE (Team Project)

*Cross Platform mobile application built using Flutter, Dart and Firebase
This application allows its users to place their blood donation requests on the platform from where the interested donors can contact the user, minimizing the amount of time required for the search of donor. This project aims to make the process of blood donation, organ donation and donation of medical equipment quicker, easier, and more convenient for users.*

Project Contribution-Designing an engaging UI/UX and content for the application

E-COMMERCE WEBSITE

Built using HTML, CSS and JavaScript

A fully responsive and engaging e-commerce website containing all necessary ecommerce pages. The users can select various products after checking their details and add them to their cart. The website also contains a blog section where users can read various fashion related blogs.

DS/ALGO-TEMPLATES

An extensive library written in C++, containing implementations for a majority of well known data structures, algorithms and techniques used in Competitive Programming. All the implementations have been tested on various online platforms like CodeChef, Codeforces, LeetCode.
